*Lecture program of interest to all oral healthcare providers and business staff*

*One day programs that have both a lecture and hands-on component*

*Multi-day programs that have both a lecture and hands-on component*
Dear Dedicated Learners,

It is with great enthusiasm that I share the continuing dental and dental hygiene education line-up for Fall 2018 and Winter/Spring 2019.

Increasingly, oral healthcare providers look to the Dr. Gerald Niznick College of Dentistry at the University of Manitoba for providing competency-driven and certification level programming. Over the years, we have developed a number of certification courses (which are run annually) that have received national distinction, including:

- Local Anesthesia Technique for Dental Hygienists Certification
- Restorative Techniques for Dental Hygienists Certification
- Cone Beam Radiology Technique and Interpretation Certification

In 2019, we will add to this list Oral Minimal Conscious Sedation for Dental Patients, a course that satisfies the Manitoba Dental Association’s bylaw requirements for Initial Qualification/Training and Continuing Competency certification to administer conscious sedation of a single oral sedative agent. In addition, it is exciting to announce the commitment of experts from our faculty to give a comprehensive course on the art and science of placing gold inlays/onlays. Other leading-edge courses coming up include a hands-on program on anterior restorations, and the care of immunocompromised dental patients. I hope you’ll join us for these exciting programs.

It is with sincere gratitude to my colleagues and friends and fond memories of my decade at the University of Manitoba that I return to my speaking and consulting business in the United States. I must take this moment to acknowledge the dedication of Laura Friesen, who has helped me accomplish my work at the UofM and the support of Dean Tony Iacopino, and Vice Dean of Continuing Competency and Assessment (CCA), Dr. Christine Polimeni. I leave knowing that the future of CCA for Dentistry and Dental Hygiene, at the University of Manitoba, is in the very capable hands of my successor, Dr. Nancy Auyeung. If I can ever be of assistance to my fellow oral healthcare practitioners in Canada, I hope you will not hesitate to let me know how I can help.

To universal health,

Casey Hein, BSDH, RDH, MBA
Assistant Clinical Professor, Department of Periodontics
and Director of Education of the International Centre for Oral-Systemic Health
Dr. Gerald Niznick College of Dentistry
Director, Continuing Professional Development Program – Dentistry and Dental Hygiene

Nancy Auyeung, DMD, BSc (Dent)

Dr. Nancy Auyeung is a 1992 graduate from the Dr. Gerald Niznick College of Dentistry, University of Manitoba. Nancy maintains a private practice in Winnipeg and has been a clinical instructor at the Dr. Gerald Niznick College of Dentistry since 1996. She has previously served the Manitoba Dental Association as its Chair of Continuing Competency Committee. As well as she is a past member on the Board of Directors and President in 2015.

Nancy supports her passion for and service to the dental profession in her new role as Director of Continuing Professional Development for Dentistry and Dental Hygiene at the Office of Continuing Competency and Assessments, Rady Faculty of Health Sciences effective June 18, 2018.
Contemporary composite resin materials and techniques allow dentists to accurately recreate lost tooth structure, but we need to have a thorough understanding of the color theory and the tooth morphology to mimic nature in restorations. The morning program will demystify color selection and restoration mapping and provide participants with a step-by-step guide on composite layering, finishing and polishing techniques. Practical tips will be shared to achieve excellence in the clinical practices. During the afternoon hands-on session in simulation labs, participants will perform procedures associated with challenging aesthetic cases such as large Class IV restorations and peg lateral incisors.
FRIDAY, NOVEMBER 23 – SUNDAY, NOVEMBER 25, 2018

LOCAL ANESTHETIC TECHNIQUES FOR DENTAL HYGIENISTS

(LECTURE & HANDS-ON)
45 HOURS CDE CREDITS
FEE: DENTAL HYGIENIST $1,565

Diane Girardin, Dip DH, RDH
Course Director and Instructor for Local Anesthetic Course for Dental Hygienists;
Instructor; School of Dental Hygiene,
Dr. Gerald Niznick College of Dentistry, Rady Faculty of Health Sciences, University of Manitoba
and other faculty members of the School of Dental Hygiene

This course will prepare dental hygienists to become competent in the administration of both block and infiltration local anesthesia. Emphasis is placed on the mechanisms of pain and a thorough understanding of the pharmacology of drugs used in dentistry and their interactions with patients’ current medical conditions and medications. The course has a self-study component which occurs prior to the three-day workshop. Following a review of information included in the self-study materials, participants will complete a pre-clinical examination which has a passing grade of 70 per cent. During Days 2 and 3, participants will receive over-the-shoulder coaching as they administer local anesthesia on each other. Upon successful completion of the clinical competency examination at the end of the program, participants will be issued a certificate of completion.
SATURDAY, NOVEMBER 24 & SUNDAY, NOVEMBER 25, 2018 (PART 1)
SATURDAY, JANUARY 19 & SATURDAY, FEBRUARY 2, 2019 (PART 2) OPTIONAL

GOLD – STILL THE PREMIERE MATERIAL IN DENTAL RESTORATIONS:
INLAYS AND ONLAYS IN THE RV TUCKER TRADITION

(Lecture & Hands-on)
32 Hours CDE Credit (Total for both Parts 1 & 2)

(PART 1) SIMULATION
16 Hours CDE Credit (Includes 2 Hours of Course Pre-Reading)
Fee: Dentist $1,800/ Dental Assistant $250

(PART 2) (LIVE PATIENT CARE)
16 Hours CDE Credit (Includes 2 Hours of Patient Contact
Prior to Course)
Fee: Dentist $1,800/ Dental Assistant $250

Anthony T. Nowakowski, DMD, BSc, MA, (Dent Ed)
Assistant Professor;
Coordinator General Practice Seminars,
Coordinator Interdisciplinary Case Studies,
Department of Restorative Dentistry,
Dr. Gerald Niznick College of Dentistry, Rady Faculty of
Health Sciences, University of Manitoba

Aaron Kim, DMD, BSc, FICD, FAID
Associate Professor, Associate Dean, Clinics
Dr. Gerald Niznick College of Dentistry, Rady Faculty of
Health Sciences, University of Manitoba

W. Terrence Koltek, DMD, BSc
Instructor, Department of Restorative Dentistry
Dr. Gerald Niznick College of Dentistry, Rady Faculty of
Health Sciences, University of Manitoba
Private Practice, Winnipeg, Manitoba

Christopher Cottick, DMD, BSc
Section Head Adult Dentistry Health Science Center;
Medical Director Winnipeg Regional Health Authority
Oral Health Program;
Instructor, Department of Restorative Dentistry
Dr. Gerald Niznick College of Dentistry, Rady Faculty of
Health Sciences, University of Manitoba
Private Practice, Winnipeg, Manitoba

The concepts and techniques for placing precise cast gold – considered by many as the premiere method of restoration – has become somewhat of a dying art. Yet, gold restorations are beautiful, long-lasting, and increasingly, patients are asking about placing gold in their mouths. This comprehensive course provides education and clinical training in the casting and placement of gold inlays/onlays using techniques developed by Dr. RV Tucker and followed by RV Tucker Academy Study Clubs throughout the world.

Part 1 – During this two-day, intensive, hands-on course, participants will prepare, cement, finish and polish several inlay/onlay castings on manikins in the Dr. Gerald Niznick College of Dentistry’s main clinic. Each day will begin with lectures on topics such as advantages and disadvantages of cast gold, the restorative cycle, biodegradation, and why, where, and how to place gold castings. During the hands-on workshop, expert instructors will provide concentrated over-the-shoulder coaching to guide participants in applying principles taught in lectures, in addition to demonstrating the use of digital scanning for gold casting. Dentists are encouraged to bring their dental assistants.

Part 2 (Optional) – During this two-day program, participants who want to advance their skills by delivering care on their patients, will be provided expert guidance in placing gold inlays/onlays. Lectures at the beginning of the days will share case studies, which will be followed by discussion.

Special Notes: All laboratory fees, including gold, are covered in the course fee. Participants will be provided the use of Tucker Technique hand instruments and burs, which can also be purchased by participants.

Participants must bring their own high and low speed handpieces including attachments for straight and contra- angle slow speed handpiece; both compatible with ADEC coupler. Loupes are recommended.

Registrants will be encouraged to complete several pre-readings, which will be identified to participants several weeks before the course.
Dental anxiety is an unfortunate reality for many Canadians. While there are a number of ways to address this situation for patients, one of the most effective is the use of oral sedatives. There are a number of categories of medications available for this purpose, including benzodiazepines, antihistamines, “natural” sleep aids (e.g. melatonin, camomile), and a host of others. One of the keys in the management of dentally anxious patients is for dentists is to learn to make the safest and most effective pharmacologic choices for them.

This course will focus on how to recognize patients that might benefit from minimal conscious sedation; that is, relaxation that allows patients to independently maintain their own airway while making their dental experience less frightening. Patients in this state can ask and answer questions during their appointment.

This course will include the following topics:
- Provincial sedation bylaws
- Appropriate patient selection and assessment
- Sedative medication pharmacology
- Oral sedation protocols
- Recognition and management of sedation emergencies

At the successful conclusion of this course, participants will be certified to provide oral minimal conscious sedation for their patients [according to MDA Bylaw for Pharmaceutical Behaviour Management].

This course satisfies the Manitoba Dental Association’s bylaw requirements for Initial Qualification/Training and Continuing Competency certification to administer conscious sedation of a single oral sedative agent.
SATURDAY, MARCH 23, 2019

DENTAL MANAGEMENT OF THE IMMUNOCOMPROMISED PATIENT

(LECTURE)
6 HOURS CDE CREDIT
FEE: DENTIST $295; DENTAL HYGIENIST/ThERAPlIST $135; DENTAL ASSISTANT/OTHER $95

Nelson L. Rhodus, DMD, MPH, FICD, FRCSEd
Morse Distinguished Professor
Director, Division of Oral Medicine
Diplomate, American Board of Oral Medicine
University of Minnesota

Within the expanding population of older people, more patients are experiencing health problems with the propensity for complications from dental treatment. Many of these medical problems or their treatment render the dental patient immunocompromised and therefore more susceptible to oral and systemic complications including infection, antimicrobial resistance, etc. Dentists and dental hygienists have a responsibility to ensure their patients’ health and safety. This course provides practical guidance that will assist clinicians in determining the severity and relative stability of common immunocompromised disorders so course participants will know how to proceed to provide the best possible care and avoid complications. Concise, clinically-focused information will detail the basic disease process for various immunocompromised conditions, along with incidence and prevalence, pathophysiology, signs and symptoms, laboratory findings, currently accepted medical therapies, and recommendations for specific dental management. Dr. Rhodus will provide practical tips to expedite easier detection and management of immunocompromised medical conditions. Ample time will be allotted for Q and A.
FRIDAY, APRIL 5 – SUNDAY, APRIL 7, 2019

CONBEAM RADIOLOGY TECHNIQUE AND INTERPRETATION CERTIFICATION

(LECTURE & HANDS-ON)
18 HOURS CDE CREDIT
FEE: DENTIST $2,490

Meredith Brownlee, DMD, BSc, MDS, (OMFR), FRCD(C), Dip. ABOMR
Assistant Professor; Head; Oral & Maxillofacial Radiology,
Department of Dental Diagnostics and Surgical Sciences,
Dr. Gerald Niznick College of Dentistry, Rady Faculty of
Health Sciences, University of Manitoba

Idris Elbakri, PhD, MCCPM
Imaging Physics; CancerCare Manitoba
Assistant Professor; Radiology
Max Rady College of Medicine
Rady Faculty of Health Sciences,
University of Manitoba

Ingvar A. J. Fife, PhD, CRadP, CSci, MIPEM
Head; Radiation Protection and Imaging Physics,
Medical Physics, CancerCare Manitoba
Adjunct Professor; Physics and Astronomy
Assistant Professor; Radiology
Max Rady College of Medicine
Rady Faculty of Health Sciences,
University of Manitoba

For general dentists and dental specialists alike, the emerging world of three-dimensional (3D) imaging can be an overwhelming, yet exciting venture. Although incorporating this technology into the dental practice can prove to be a challenge, it can reward the practitioner with the advantages of visualizing regions of interest without distortion or superimposed anatomical structures.

This three-day certification course in cone beam computed tomography (CBCT) taught by University of Manitoba experts from oral and maxillofacial radiology, and radiation protection and imaging physics, is the first CBCT certification program taught within the province.

The program will include a didactic portion and a hands-on clinical portion that utilizes the CBCT in the Ross McIntyre Digital Imaging Centre at the University of Manitoba, Dr. Gerald Niznick College of Dentistry. The didactic component will span Friday and Saturday, in both the morning and afternoon sessions, and will thoroughly explore the principles of CBCT imaging technology. This broad scope of topics will educate general practitioners and dental specialist in the realm of oral radiology and the use of the CBCT in their practice, as well as emphasize the responsibilities of the clinician inherent in utilizing this imaging modality. The Sunday morning session will encompass an interpretation seminar with discussion of patient cases. In the afternoon, the attendees will be split into two separate groups that will each gain experience exposing a CBCT image, as well as a mini-seminar on the manipulation of the images in the third-party 3D software.
WHAT CAN A PROSTHODONTIST DO FOR YOUR PATIENTS?

(LECTURE)
6 HOURS CDE CREDIT
FEE: DENTIST $295; DENTAL HYGIENIST/ THERAPIST $135; DENTAL ASSISTANT/OTHER $95

Igor J. Pesun, DMD, MS, FACP, FRCD(C), FICD(C)
Associate Professor; Head, Division of Prosthodontics,
Department of Restorative Dentistry,
Dr. Gerald Niznick College of Dentistry, Rady Faculty of Health Sciences
University of Manitoba

and other members from the Dr. Gerald Niznick College of Dentistry Graduate Prosthodontics program

National Prosthodontic Awareness Week is an opportunity to provide the profession with more information on what prosthodontists can provide to assist oral healthcare providers’ care for their patients. This program aims to provide the general oral health community information on the procedures that prosthodontists can provide and how digital dentistry is revolutionizing how care is rendered. The program will cover all areas of digital dentistry, including how to perform better tooth preparations, and how to complete two-appointment dentures with a computer milled denture. The range of materials that can be milled and printed, and the various components that dentists and labs need to purchase will be presented. Course participants will learn how to practically apply digital work flow to their practice.
Participants of this course, which has been designed specifically for dental hygienists, will acquire the necessary knowledge and skills to place technically-sound and cosmetically acceptable dental restorations prepared by a dentist. The three-week course is comprised of pre-clinical lectures and lab work during the first week, followed by two weeks of rotation at a community clinic where participants restore teeth during live patient care, alternating with lab time to refine technique.

Prior to course participation, registrants must complete a six-week, self-study period using the required textbook and laboratory manual. Participants will be evaluated on this material during the first week, prior to engaging in classroom and clinical activities at the University of Manitoba. Prepared model teeth will be shipped to course registrants at least six weeks prior to course participation, with the expectation that students will practice restorative techniques (BOTH amalgam and composite) using the armamentarium and supplies available in their usual practice settings. On the first day of class, students will submit their restored models for evaluation. Students of this course will be evaluated for both their knowledge, and competency in placing acceptable dental restorations. The passing score for this evaluation is 70 per cent.
These activities have been planned and implemented in accordance with the standards of the Academy of General Dentistry Program Approval for Continuing Education (PACE) through the joint program provider approval of Casey Hein & Associates and the Dr. Gerald Niznick College of Dentistry, University of Manitoba. Casey Hein & Associates is designated as an Approved PACE Program Provider by the Academy of General Dentistry. The formal continuing education programs of this program provider are accepted by the AGD for Fellowship, Mastership and membership maintenance credit. Approval does not imply acceptance by a state or provincial board of dentistry or AGD endorsement. The current term of approval extends from December 1, 2015 to November 30, 2019.
